

Neurotransmitter Super Hero

Your group will need to construct a super hero that will personify your assigned neurotransmitter, please use our neurotransmitter chart to gather your information about your neurotransmitter.

For the superhero, you will create a special "power" that each one possesses based on the neurotransmitter's functions.

In order to help your classmates remember your neurotransmitter, you must do the following:

1. Create a name for your superhero that can connect to the function of the neurotransmitter.
2. Draw/create a body part that personifies your neurotransmitter's function and weakness.
3. Next to the superhero, write a description of his/her superpowers (**functions**) and their kryptonite (**malfunctions/weaknesses**). These powers must go hand in hand with the function and weakness of your specific, magical neurotransmitter.
